

NABA CORE MATRISOME
ECM-receptor interaction
Diseases of glycosylation
vasculature development
Non-integrin membrane-ECM interactions
growth
positive regulation of phosphorylation
extracellular matrix organization
kidney development
positive regulation of cell migration
Diseases associated with glycosaminoglycan metabc
ameboidal-type cell migration
skeletal system development
circulatory system process
Laminin interactions
Platelet activation, signaling and aggregation
head development
cardiac chamber development
cell morphogenesis
Proximal tubule transport
