

Metabolism of lipids
myelination
positive regulation of gliogenesis
positive regulation of lipid transport
response to hormone
Nuclear receptors meta pathway
protein import into nucleus
cellular component assembly involved in morphogen
cellular response to lipid
Ether lipid metabolism
macrophage activation
PID MYC REPRESS PATHWAY
regeneration
cardiac septum morphogenesis
PPAR signaling pathway
negative regulation of G1/S transition of mitotic cell cy
cellular component disassembly
vitamin metabolic process
defense response to virus
response to peptide
