

Nuclear receptors meta pathway
long-chain fatty acid metabolic process
olefinic compound metabolic process
Synthesis of epoxy (EET) and dihydroxyeicosatrienoi
sulfur compound metabolic process
Biosynthesis of specialized proresolving mediators (S
organic hydroxy compound metabolic process
regulation of lipid metabolic process
leukocyte activation
positive regulation of leukocyte proliferation
cellular response to peptide
lipid modification
long-chain fatty acid transport
positive regulation of immune response
Estrogen receptor pathway
Hematopoietic cell lineage
inflammatory response
positive regulation of transmembrane transport
Extrafollicular and follicular B cell activation by SARS
PPARA activates gene expression
